BUILDINGS

## COMPANY PROFILE

Incorporating:

DISTINCTIVE BUILDINGS FOR DISCERNING CLIENTS

Classic Scandinavian

## Classic Scandinavian styling. Or a distinctive contemporary look

We offer strong, attractive and durable buildings in two contrasting styles.

Our classic Scandinavian-style buildings are manufactured to our design exclusively by one of Norway's leading log building manufacturers.

Our Inovar buildings have a different visual appeal, with distinctive contemporary styling as well as exciting new design possibilities. We design and manufacture our Inovar buildings ourselves in the UK.

Whether classic or Inovar, our buildings set the benchmark for log construction quality in the UK.

Contemporary Inovar

Contemporary Buildings

## Log – a renewable natural material

We use natural resources responsibly. All logs for our classic and Inovar buildings are harvested for us in northern Scandinavia, where a comprehensive replanting programme is a legal requirement. We do not take any timber from tropical rain forests or other endangered habitats.

## Comprehensive service from planning to maintenance

Our full design and technical advice service will provide the sketch plans and costings you need for specific projects.

You can use our detailed knowledge of Planning and Building Regulations to help you make the most of your site and budget.

For example, our classic and Inovar transportable ("mobile") homes can often be much more attractive, substantial and cost-effective replacements for caravans and other temporary structures.

## We solve your problems

We erect all our buildings quickly and cleanly, with minimal disturbance to your site. We can usually overcome challenges (e.g. difficult access) that may defeat other building methods. Our classic log buildings can be passed as components through an ordinary domestic doorway, for example.

We manufacture our Inovar buildings as modules, which makes them even quicker to erect and enables you to meet your changing needs in a way not otherwise possible. At home, granny annexes without frustrating delays. At school, the ability to install extra classrooms conveniently between terms. On the farm, accommodation for family and employees that helps you make the most of your CLU plus the advantage of compliance with NPPF para. 55.

We also have long experience of working with charities, and we are sympathetic to their individual challenges. Our speed means organisers and donors quickly see the results of their efforts.

## Large-scale buildings and leisure developments

We have supplied buildings for a number of major leisure developments designed for discerning owners and visitors.

Projects include one with more than 140 solid log second homes (90 of them two-storey), and another with over 60 luxurious holiday homes.

We are often invited back to add further buildings to developments because of their visitor appeal and profitability.

Our record of success in designing and constructing larger buildings, and our position as a leading supplier to major leisure developments, are clear evidence of our expertise, capacity and reliability.

## Distinctive buildings from a company that stands the test of time

Now in our third decade, we have supplied over 2000 buildings to private clients, schools, holiday parks, local authorities, charities and public bodies. Just like our buildings, we are here to stay, with warranties and inspection programmes you can rely on.

We design, supply and erect solid log buildings for all sorts of purposes: home offices and granny annexes, holiday homes, log houses, swimming pools, larger commercial buildings and more.

## The hallmarks of quality

Our classic and Inovar buildings are noted for their attractiveness, durability and high performance, which set the standards for the whole industry.

In our classic buildings, the secret of this quality lies in Norway's traditional log construction methods, which have been used for at least 1000 years to hold a severe climate at bay.

In our Inovar buildings, we have taken the best of that tradition and transformed its possibilities in a contemporary idiom.

## Work on your site

Teams of skilled and experienced specialists will erect your building quickly and cleanly on your site, with working practices and behaviour governed by our Client's Charter.

## Warranties and maintenance

We complement our warranties with a comprehensive long-term inspection plan to give you total confidence in your new building. We are here to stay, just like our buildings.
